

The Global Creator's Setup Guide

Master your platform. Secure your privacy. Streamline your workflow.
The essential end-to-end manual for building your mobile and desktop studio.

The App Store Bypass (PWA)

Adult content policies prevent standard App Store placement.
The Progressive Web App (PWA) is your native solution.

The Clunky Way

The Pro Way

The PWA Upgrades

Speed

Instant loading directly
from your home screen
icon.

Focus

Edge-to-edge immersion
without distracting
browser tabs or URL bars.

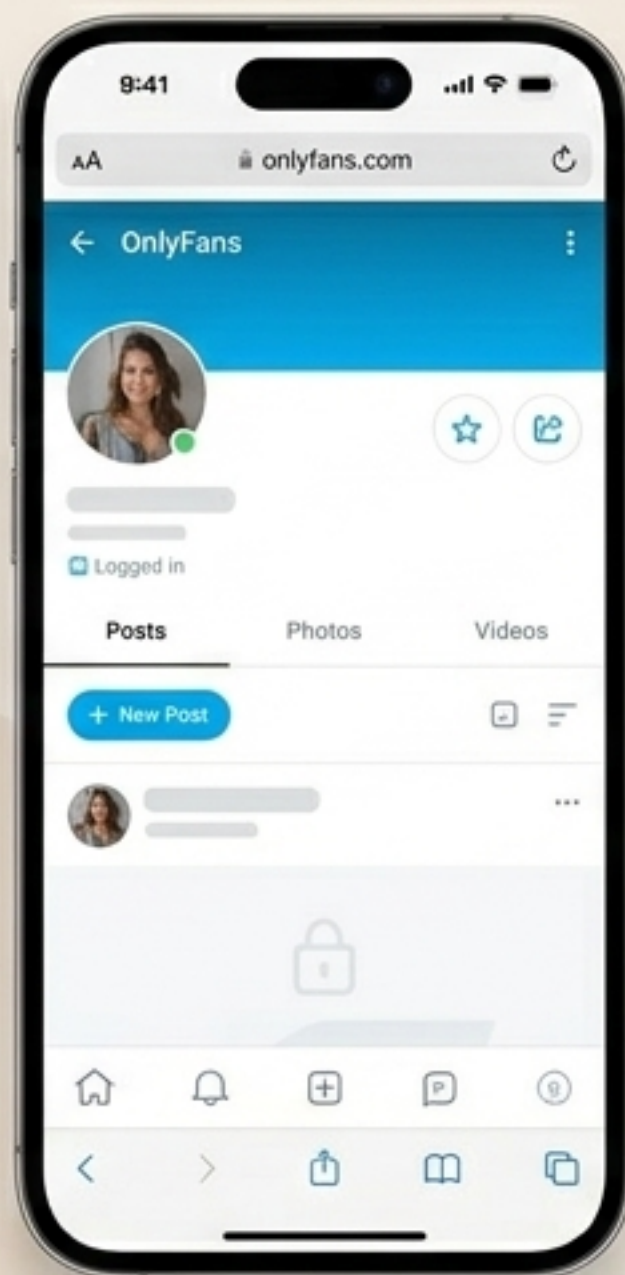

Efficiency

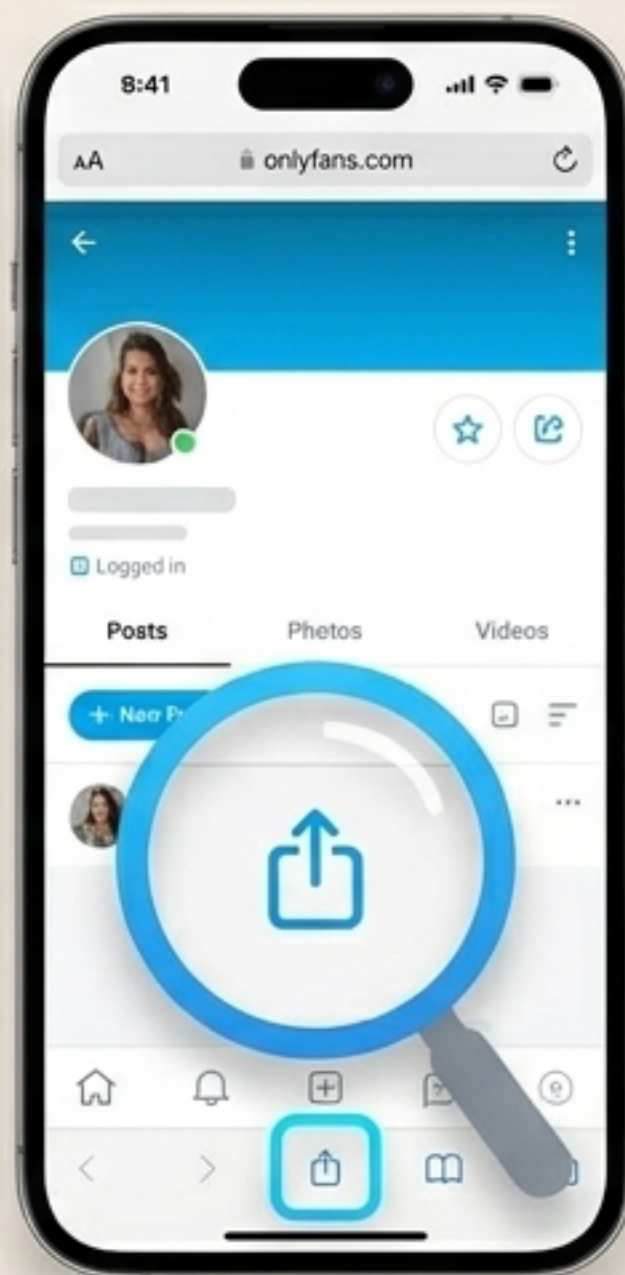

Save crucial seconds
executing mass DMs or
uploading content.

Apple iOS: Get the App in 4 Taps

Step 1: Open Safari.
(Crucial: This only works in Safari).
Go to onlyfans.com and log in.

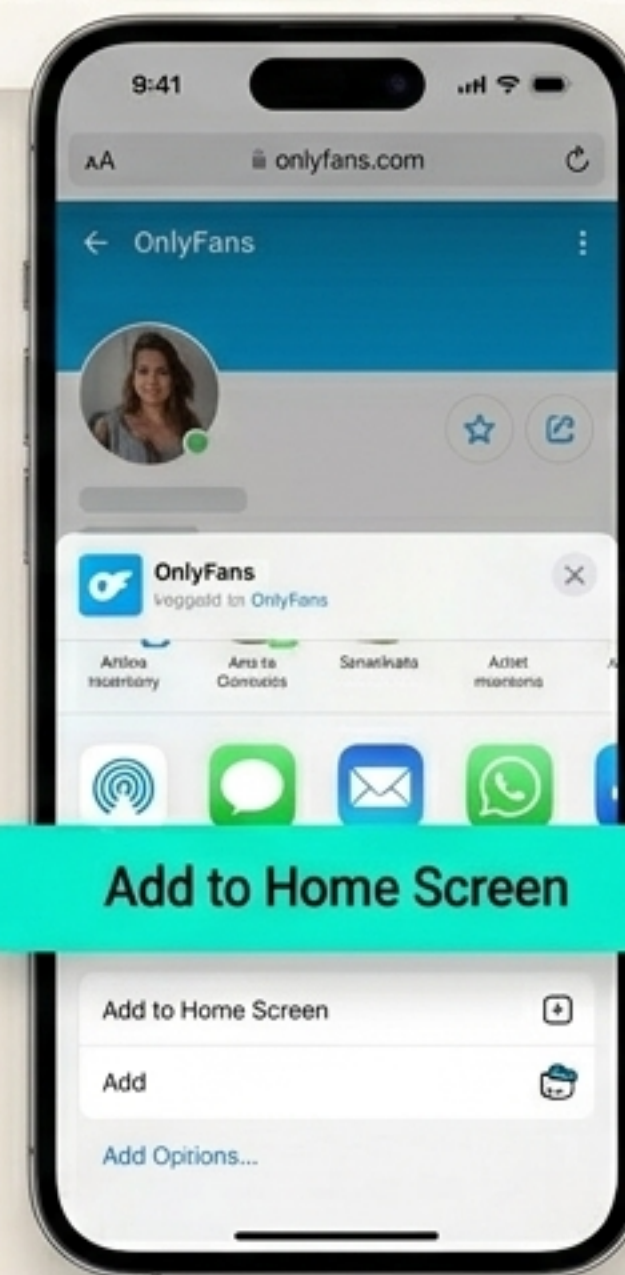

Step 2: Tap 'Share'.
Locate the square icon with the up-arrow at the bottom menu.

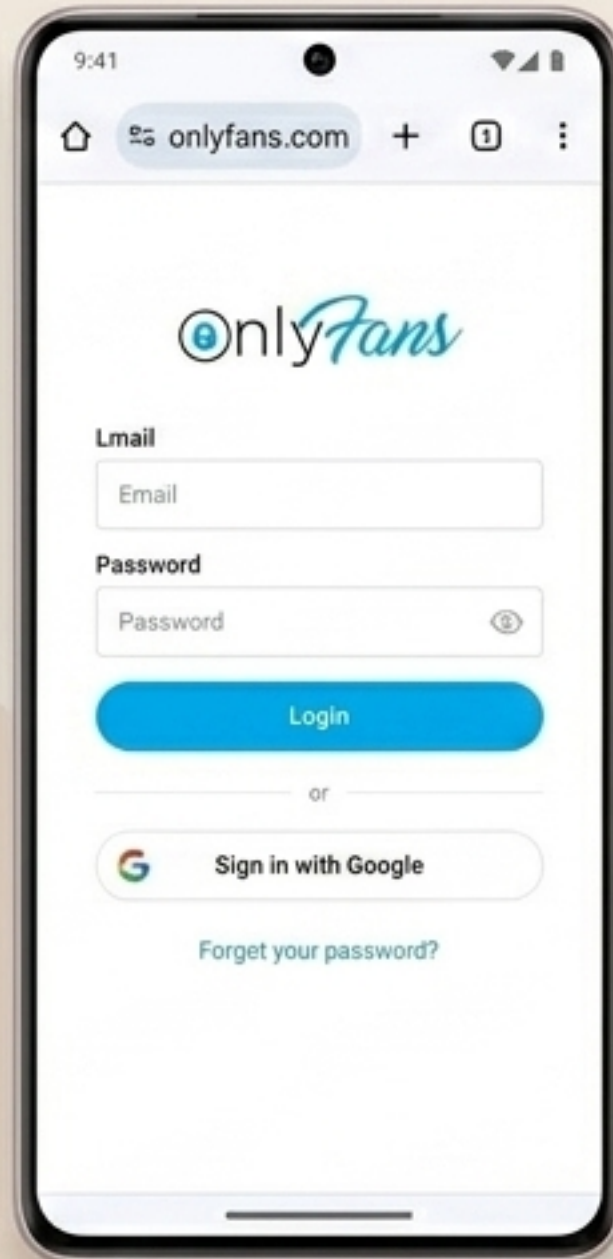

Step 3: Add to Home Screen.
Scroll down, select Add to Home Screen.

Step 4: Confirm. Leave the name as OnlyFans and hit Add to unlock the full-screen app.

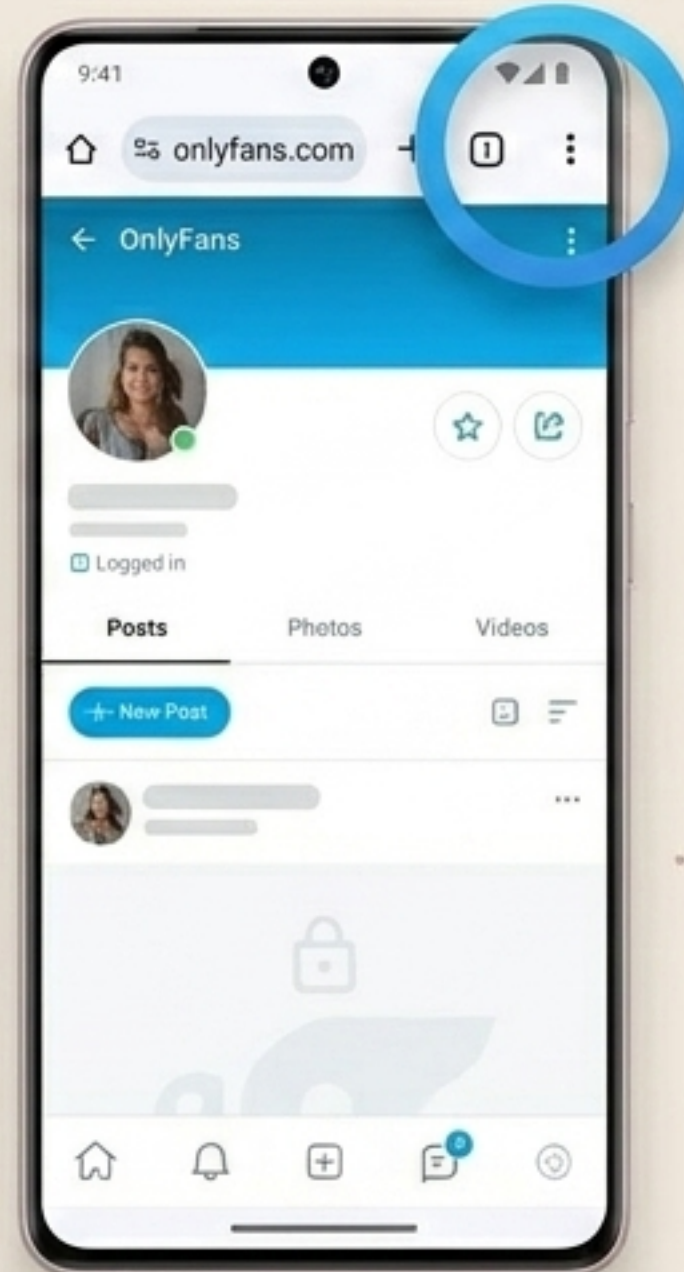

Android: Your 4-Step Setup

Step 1: Open Google Chrome.
Navigate to onlyfans.com
and log in.

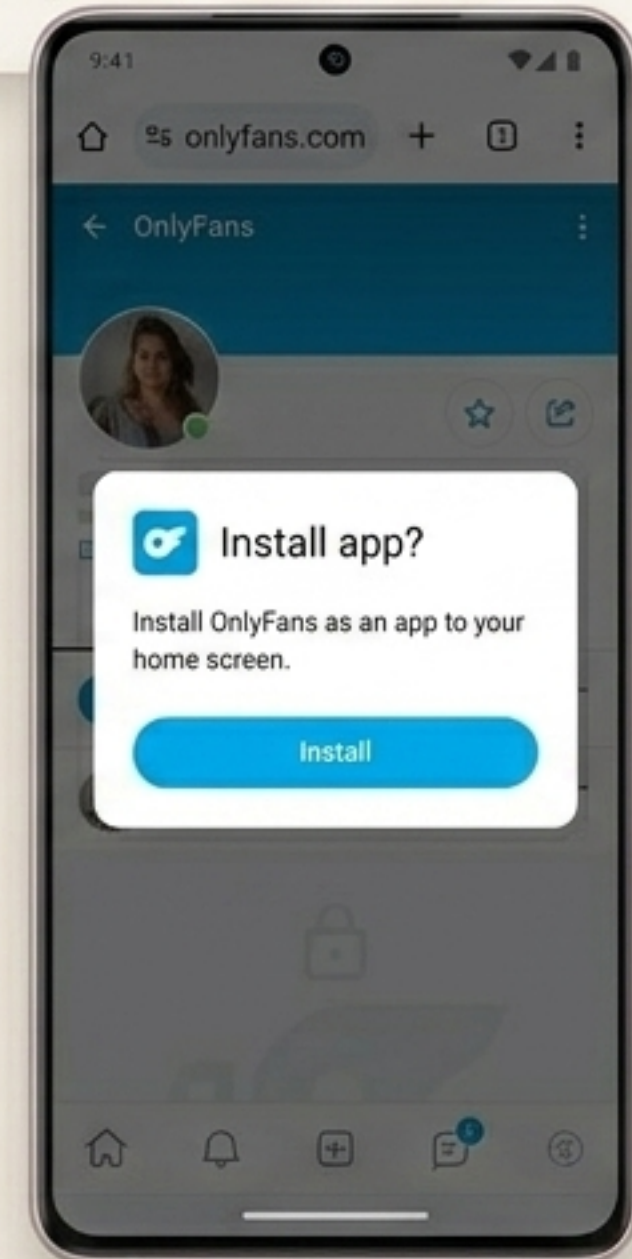

Step 2: Open Menu.
Tap the three vertical dots in
the top right corner.

Step 3: Install App.
Select Install App (or Add to Home
Screen on older devices).

Step 4: Confirm. Hit Install on the final warning
pop-up to place the icon on your home screen.

PC & Mac Setup: Your Management Hub

The desktop app is essential for professional operations: managing Chatter teams, executing Mass DMs, and batching bulk content.

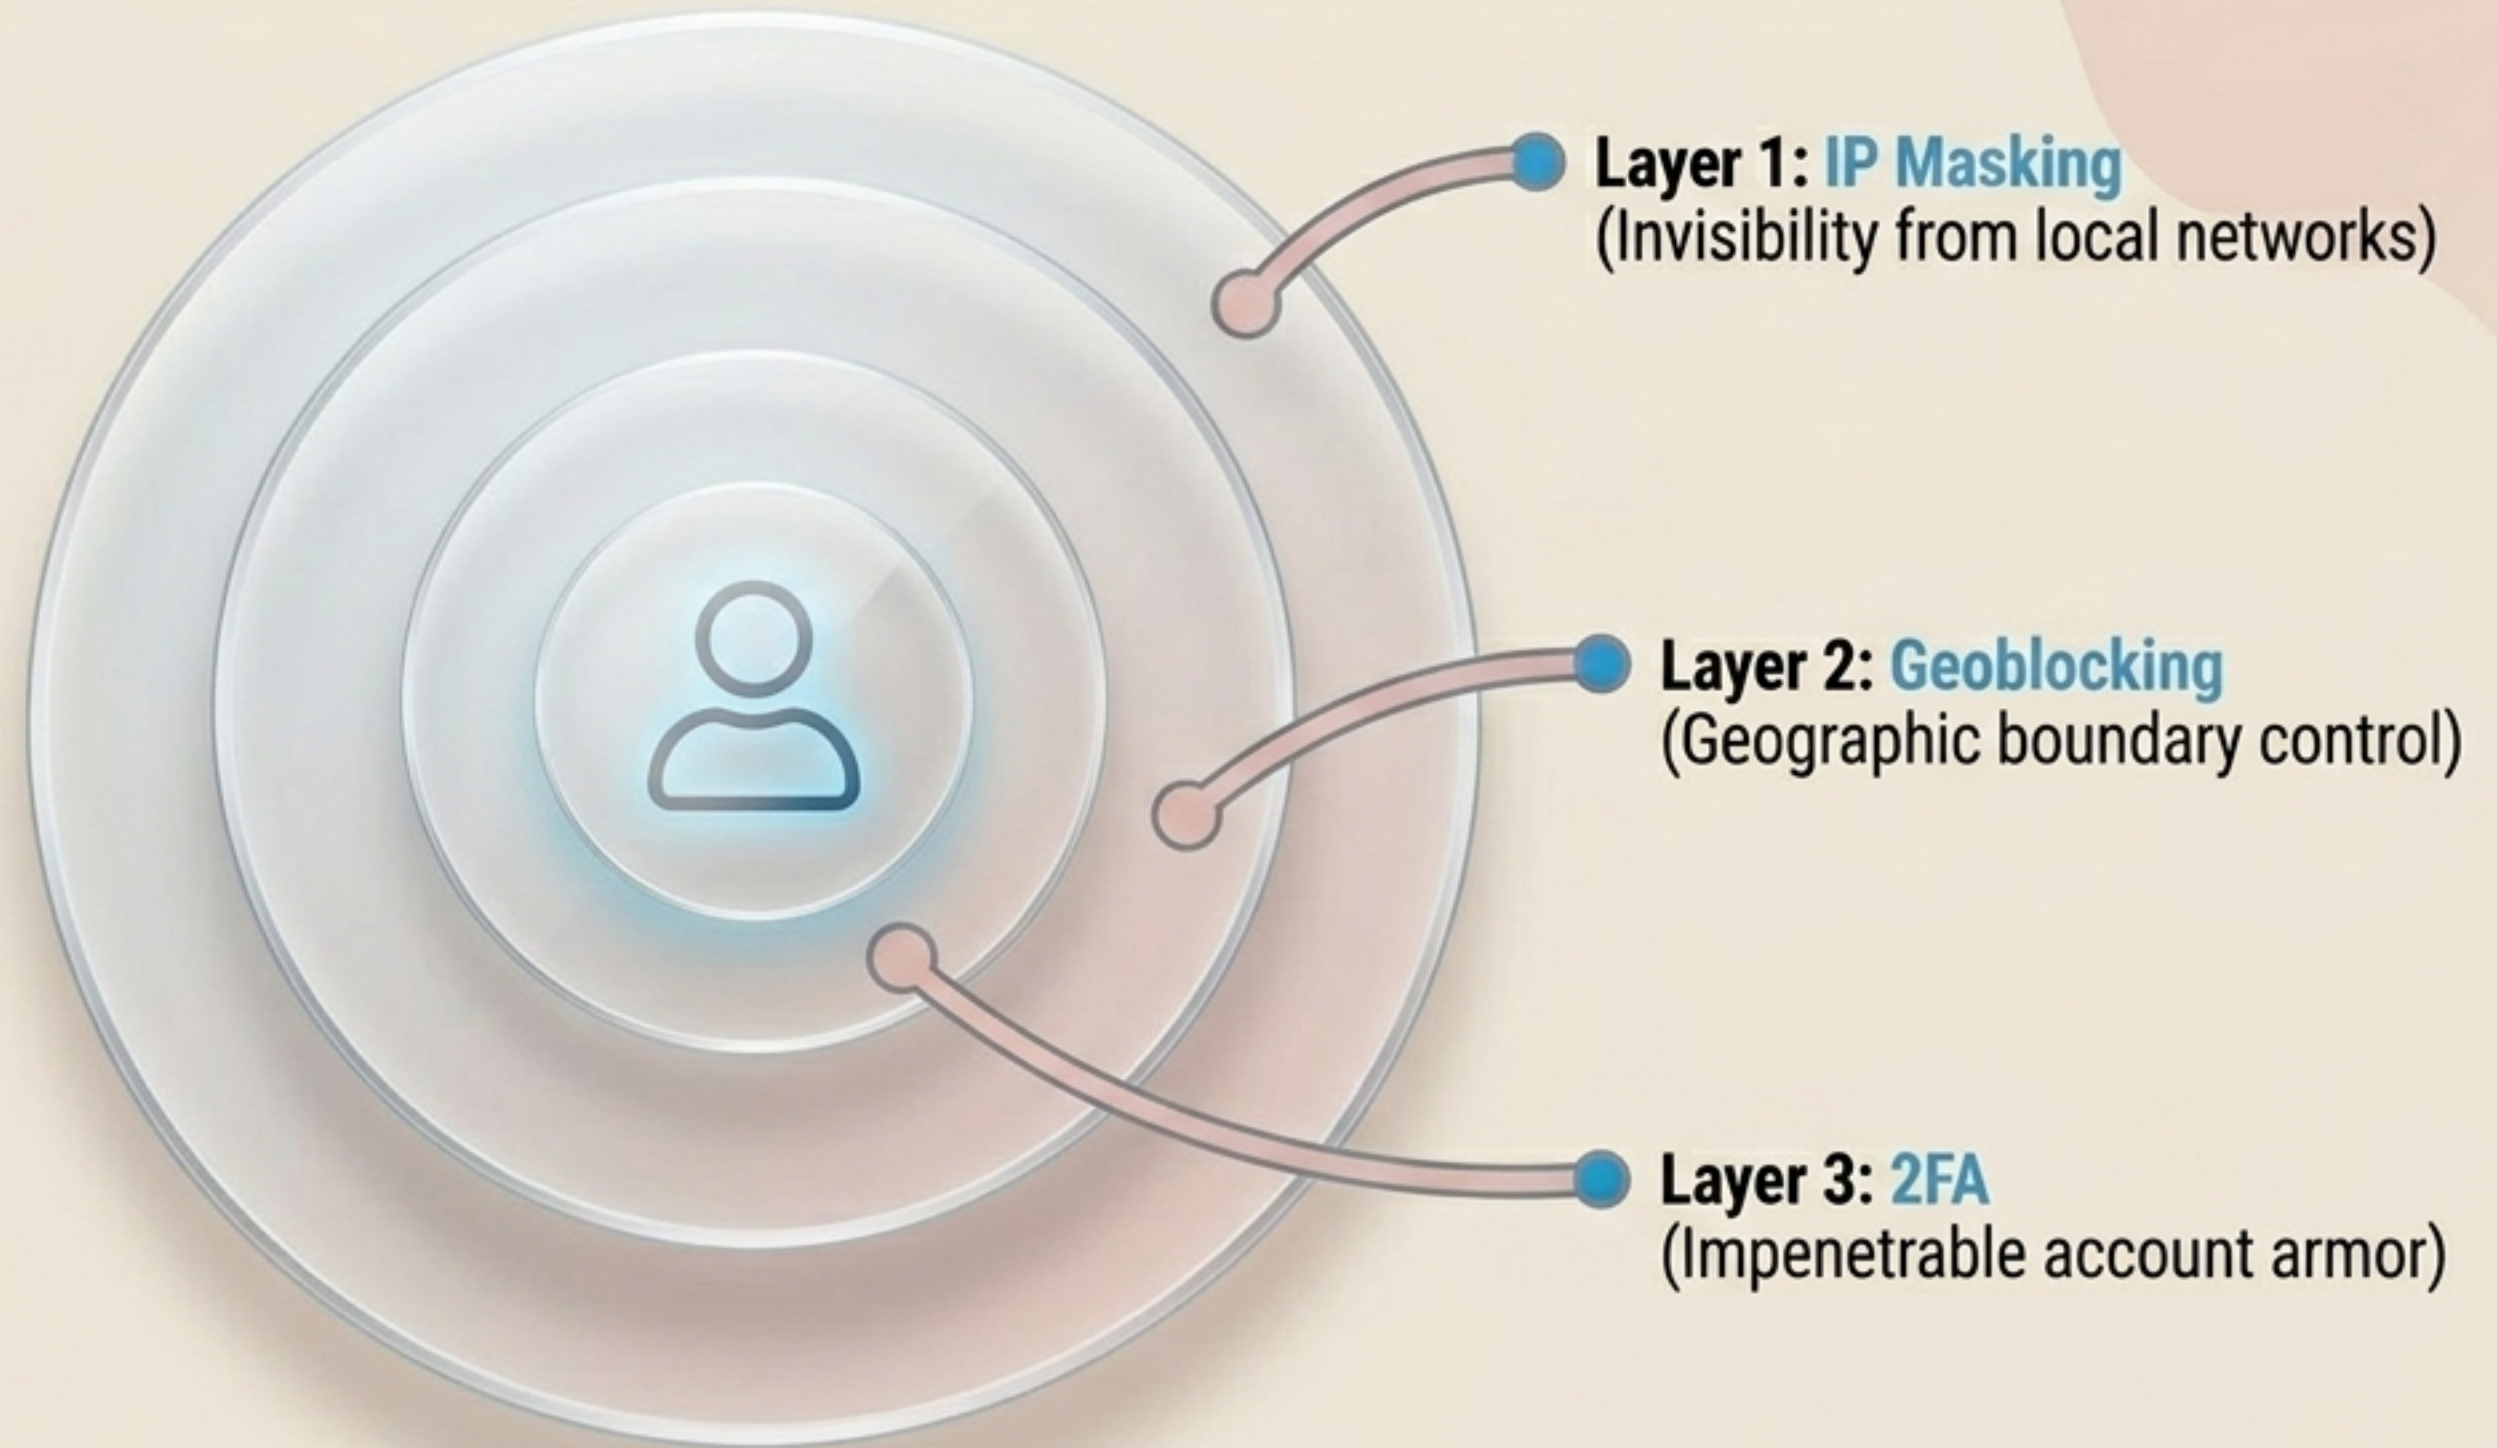

1. Open **Google Chrome** or **Microsoft Edge**.
2. Locate the **Install Icon** in the right side of the address bar. 
3. Click **Install**.

Result: It saves as a standalone application in your OS menu, running completely independently of your standard web browser.

The Fortress: 3 Pillars of Total Security

Before posting a single piece of content, these three settings must be locked in to ensure total control over your identity and digital assets.

Controlling Your Visibility

Geoblocking

Navigate to the Security Menu. If you do not want your profile to be discoverable in your home country, actively block your country here.

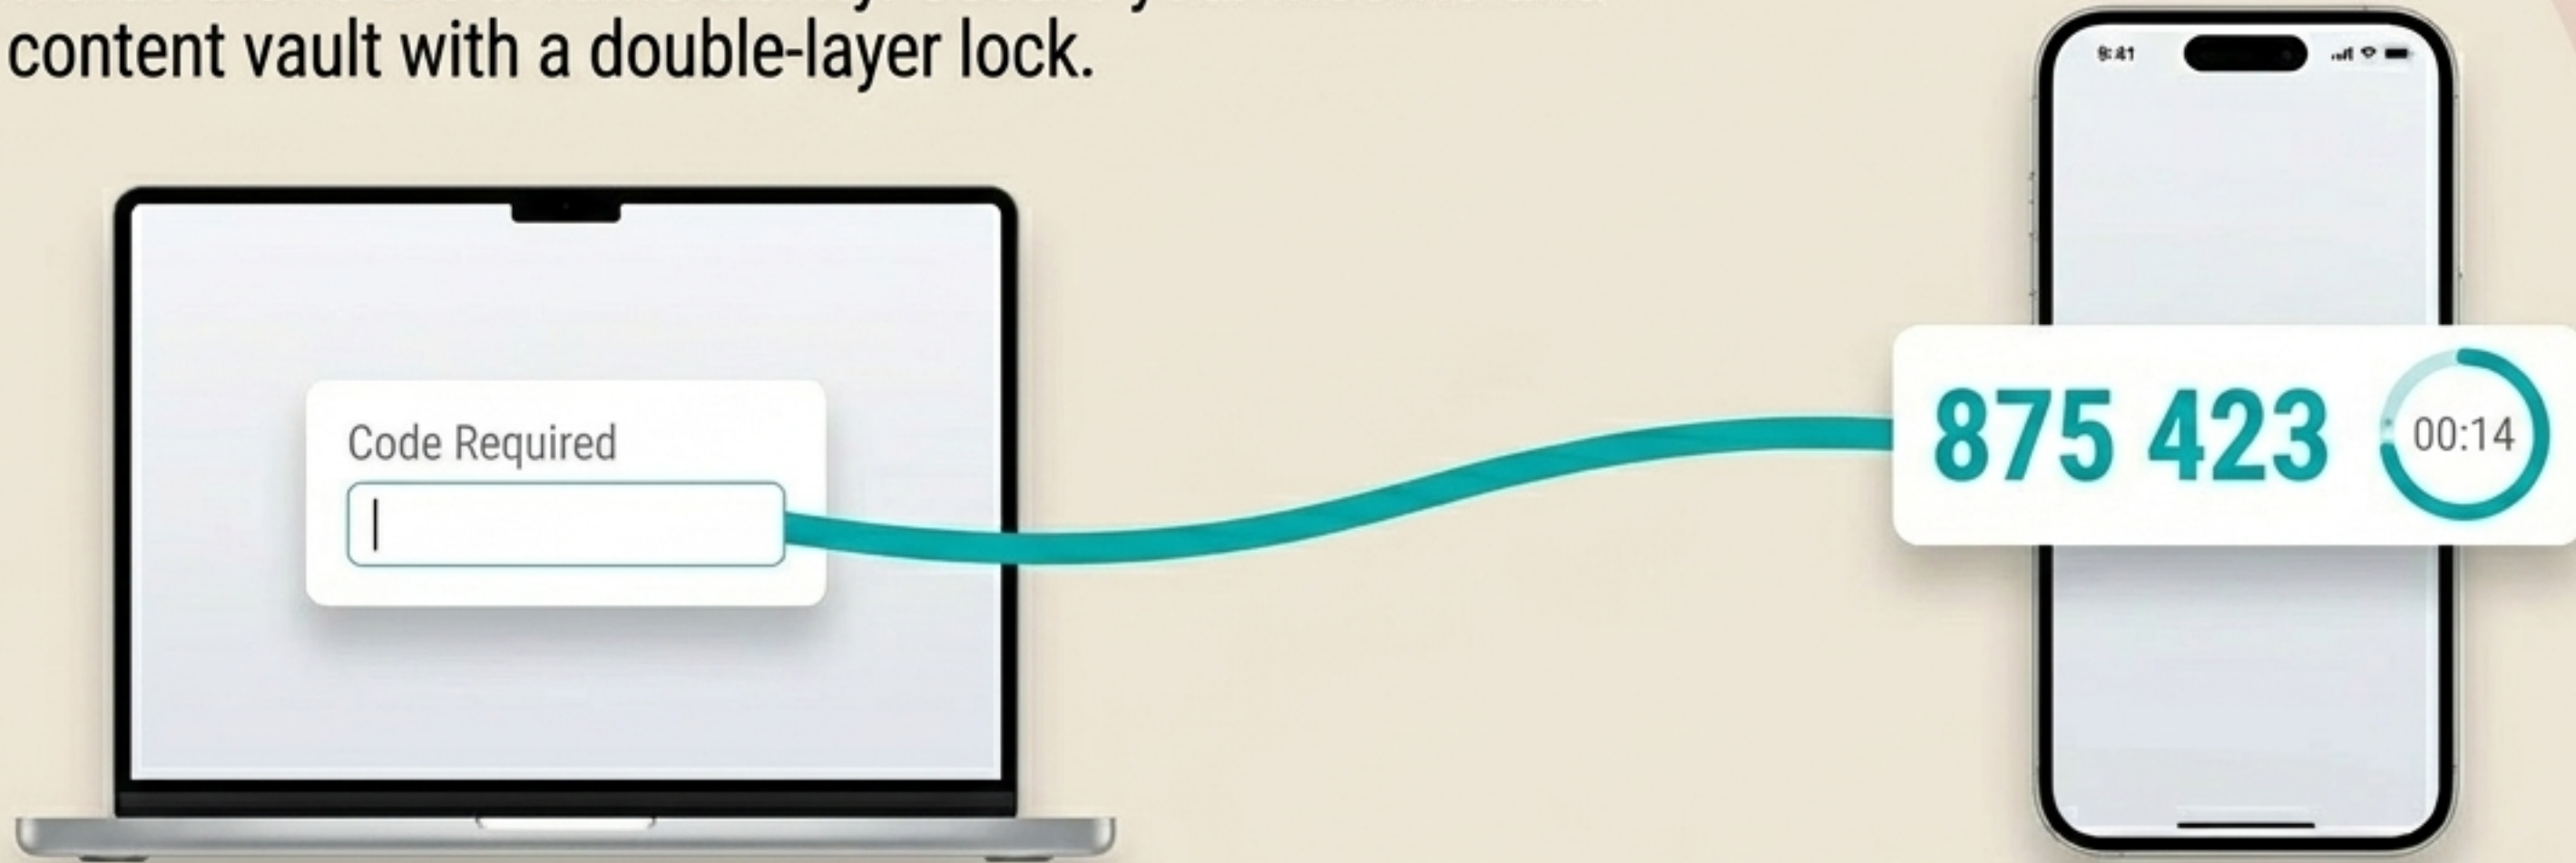

IP Masking

Never leak your physical location. Ensure you have a premium VPN installed and always turned on when operating the mobile application.

Bulletproofing Your Account (2FA)

Passwords alone are a vulnerability. Secure your income and your content vault with a double-layer lock.

Action:

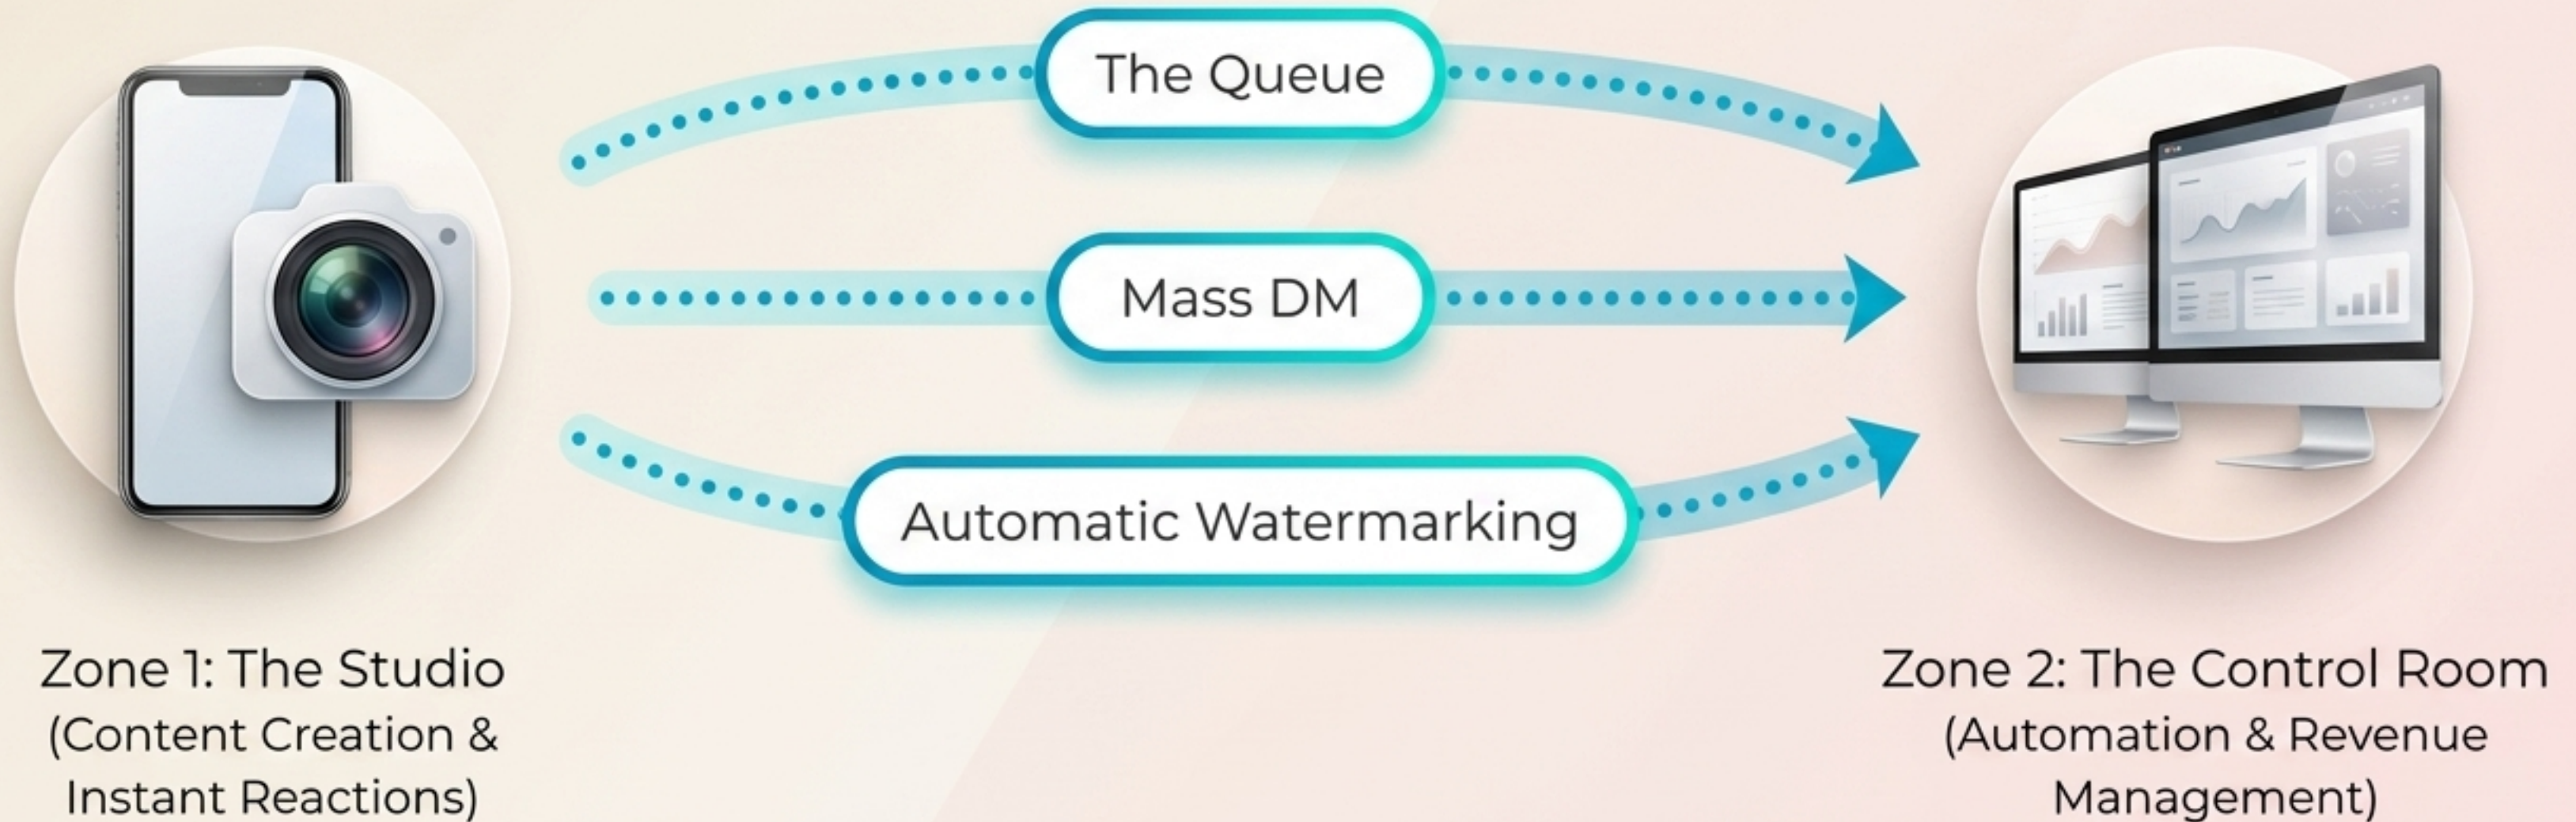

Navigate to Security Settings and enable Two-Step Verification.

Execution:

Link your account to Google Authenticator. Every login from a new device or browser will require the unique, time-sensitive code from your authenticator app.

Pro Content Management Workflows

Your phone is your camera; your PC is your control room. To scale your revenue without burning out, you must leverage these three distinct desktop tools to automate your presence and protect your assets

Tool 1: The Queue (Batching for Freedom)

The Concept

Batching means shooting large volumes of content during a single session on your mobile device.

The Pro Execution

Transfer these batches to your PC. Use the desktop Queue feature to schedule these uploads for specific future dates and times.

The Result

You maintain a highly consistent, active presence on the platform while actually taking days off.

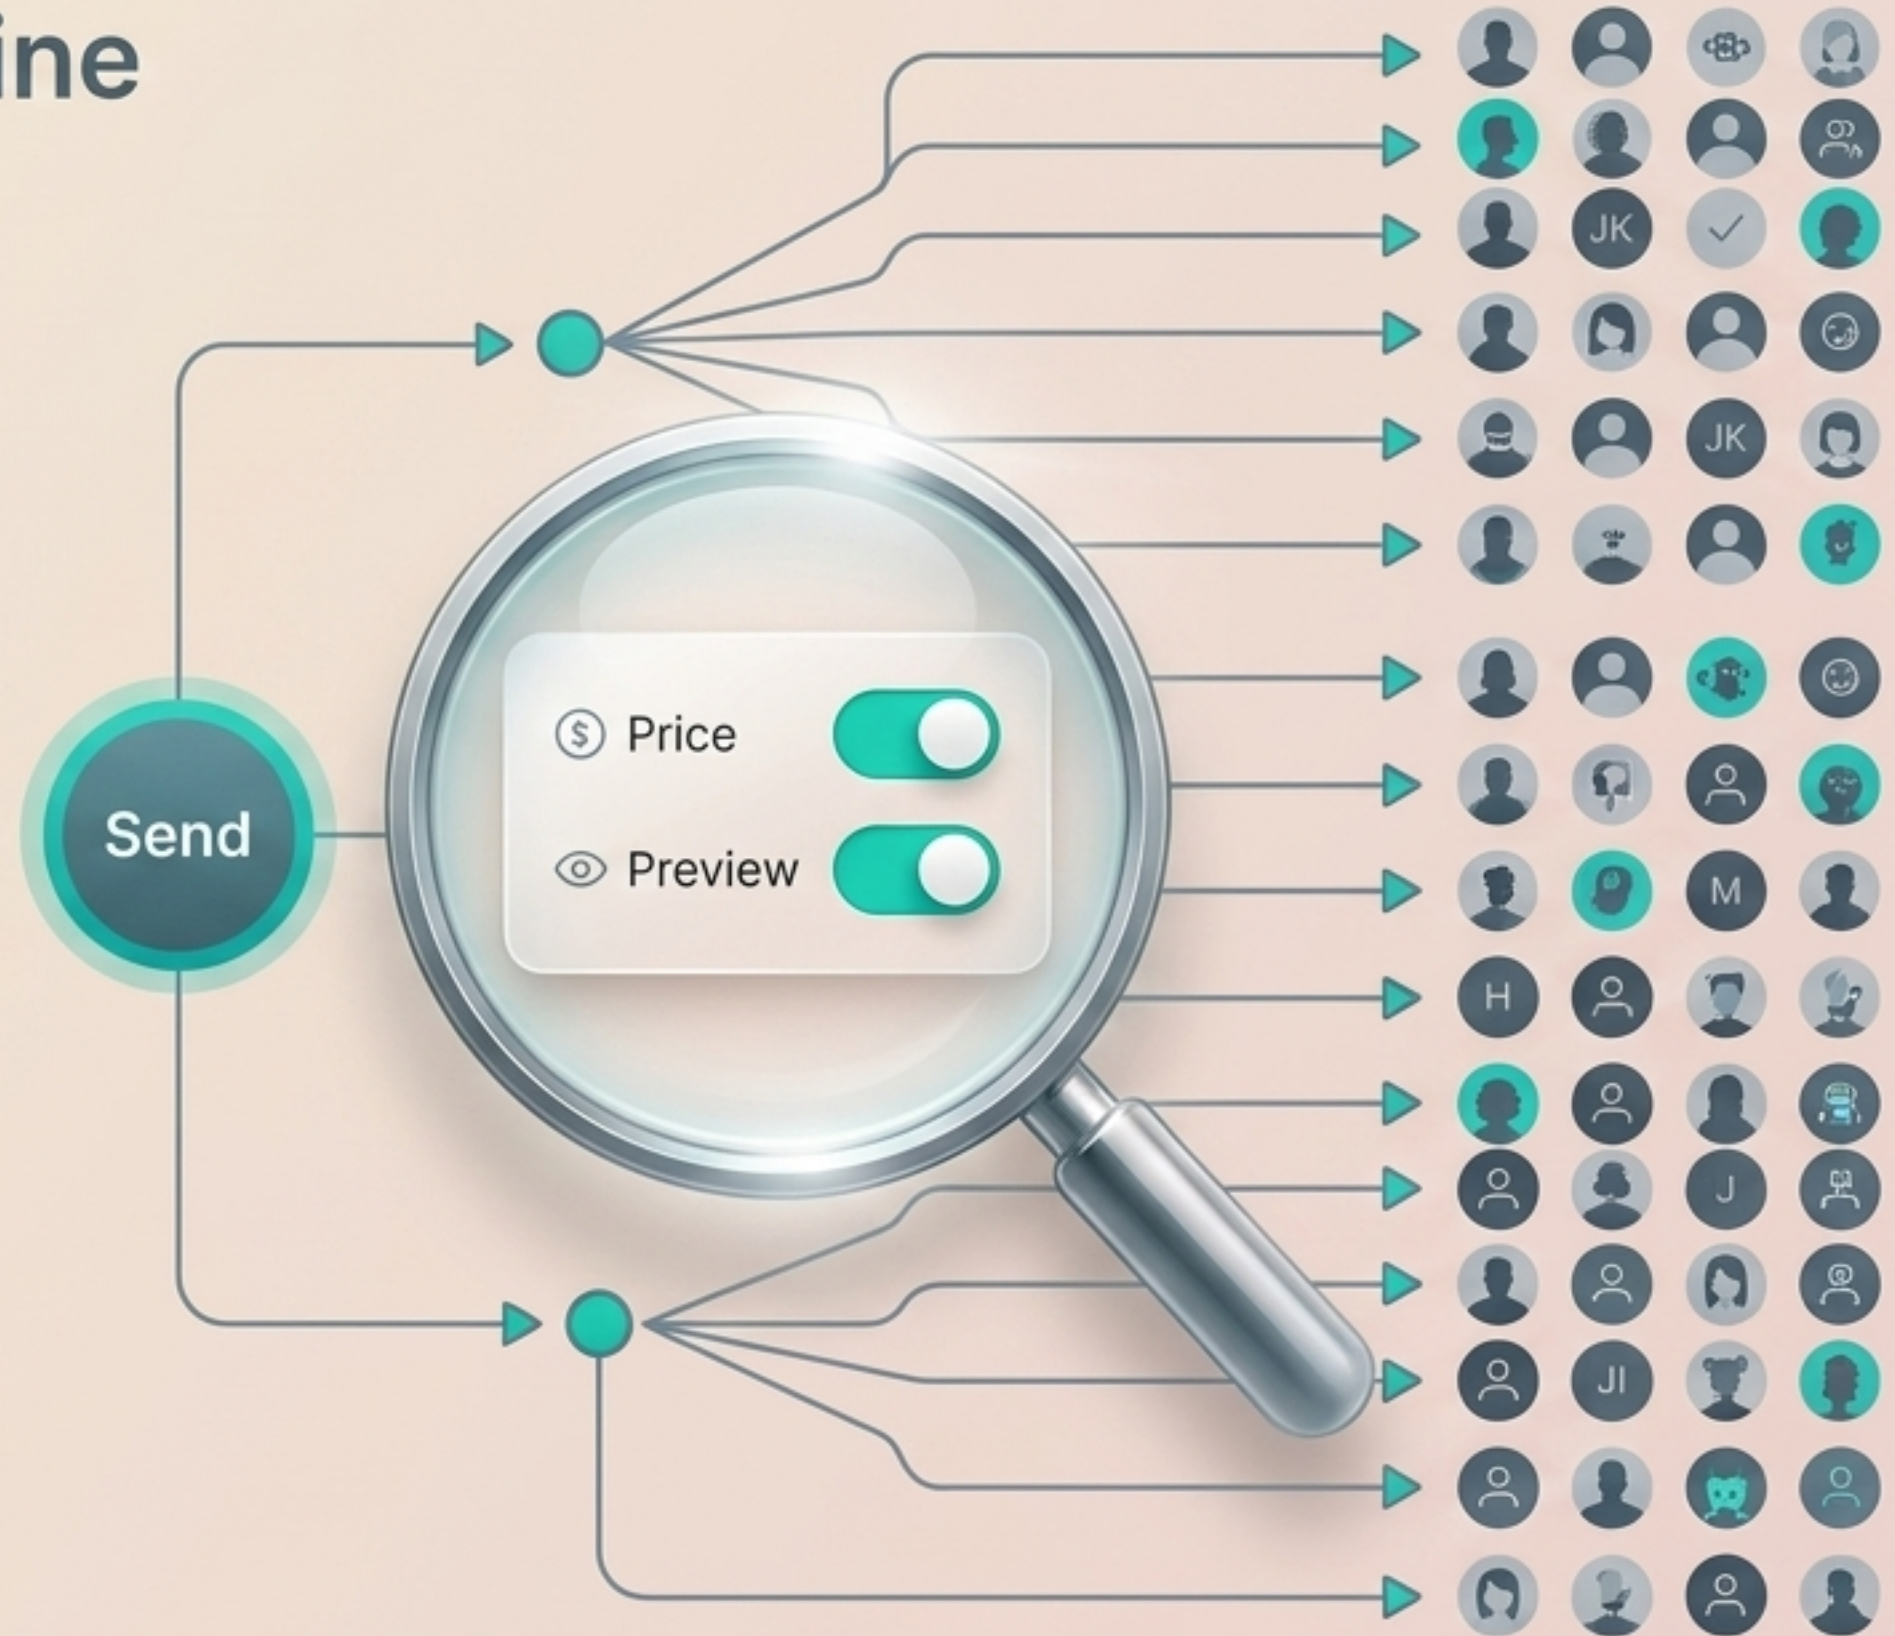

Tool 2: The Mass DM Engine

The Mechanism

The desktop Mass DM tool allows you to distribute Pay-Per-View (PPV) content or announcements to your entire subscriber list instantly.

The Crucial Checkpoint

Before executing any Mass DM, you must manually and individually verify the Price setting and the Preview attachments. Failing to check these can result in accidentally sending premium locked content away for free.

Tool 3: Claim Your Content (Watermarking)

Action

Navigate to Settings -> Privacy and Safety.

The Rule

Ensure that Automatic Watermark is toggled ON.

The Protection

This guarantees that every piece of media you upload—whether triggered from your mobile app or your PC dashboard—is automatically branded with your handle, drastically deterring theft and leaks.

Signal vs. Noise: Notification Strategy

Optimize your alerts so you only see what generates revenue, entirely eliminating spam.

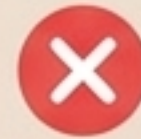

Keep ON (The Signal)

PWA Push Notifications

Receive **instant** mobile alerts when high-value spenders (Whales) message you.

New Subscriber Emails

Track your daily growth metrics.

Turn OFF (The Noise)

General Email Notifications

Disable all other platform email alerts to keep your inbox pristine and spam-free.

The Final Launch Checklist

✓	PWA installed to Home Screen (Mobile & PC)
✓	VPN actively running (Mobile)
✓	Geoblocking configured (Security Settings)
✓	2-Step Verification (Google Authenticator) active
✓	Automatic Watermarks toggled ON (Privacy & Safety)
✓	Spam emails OFF / Push Notifications ON

Your digital studio is secured, optimized, and ready.
You are clear to create.
